

Says

I want a fast and responsive PC.

I'm overwhelmed by all the options and technical jargon.

I need a PC that can handle gaming and multitasking.

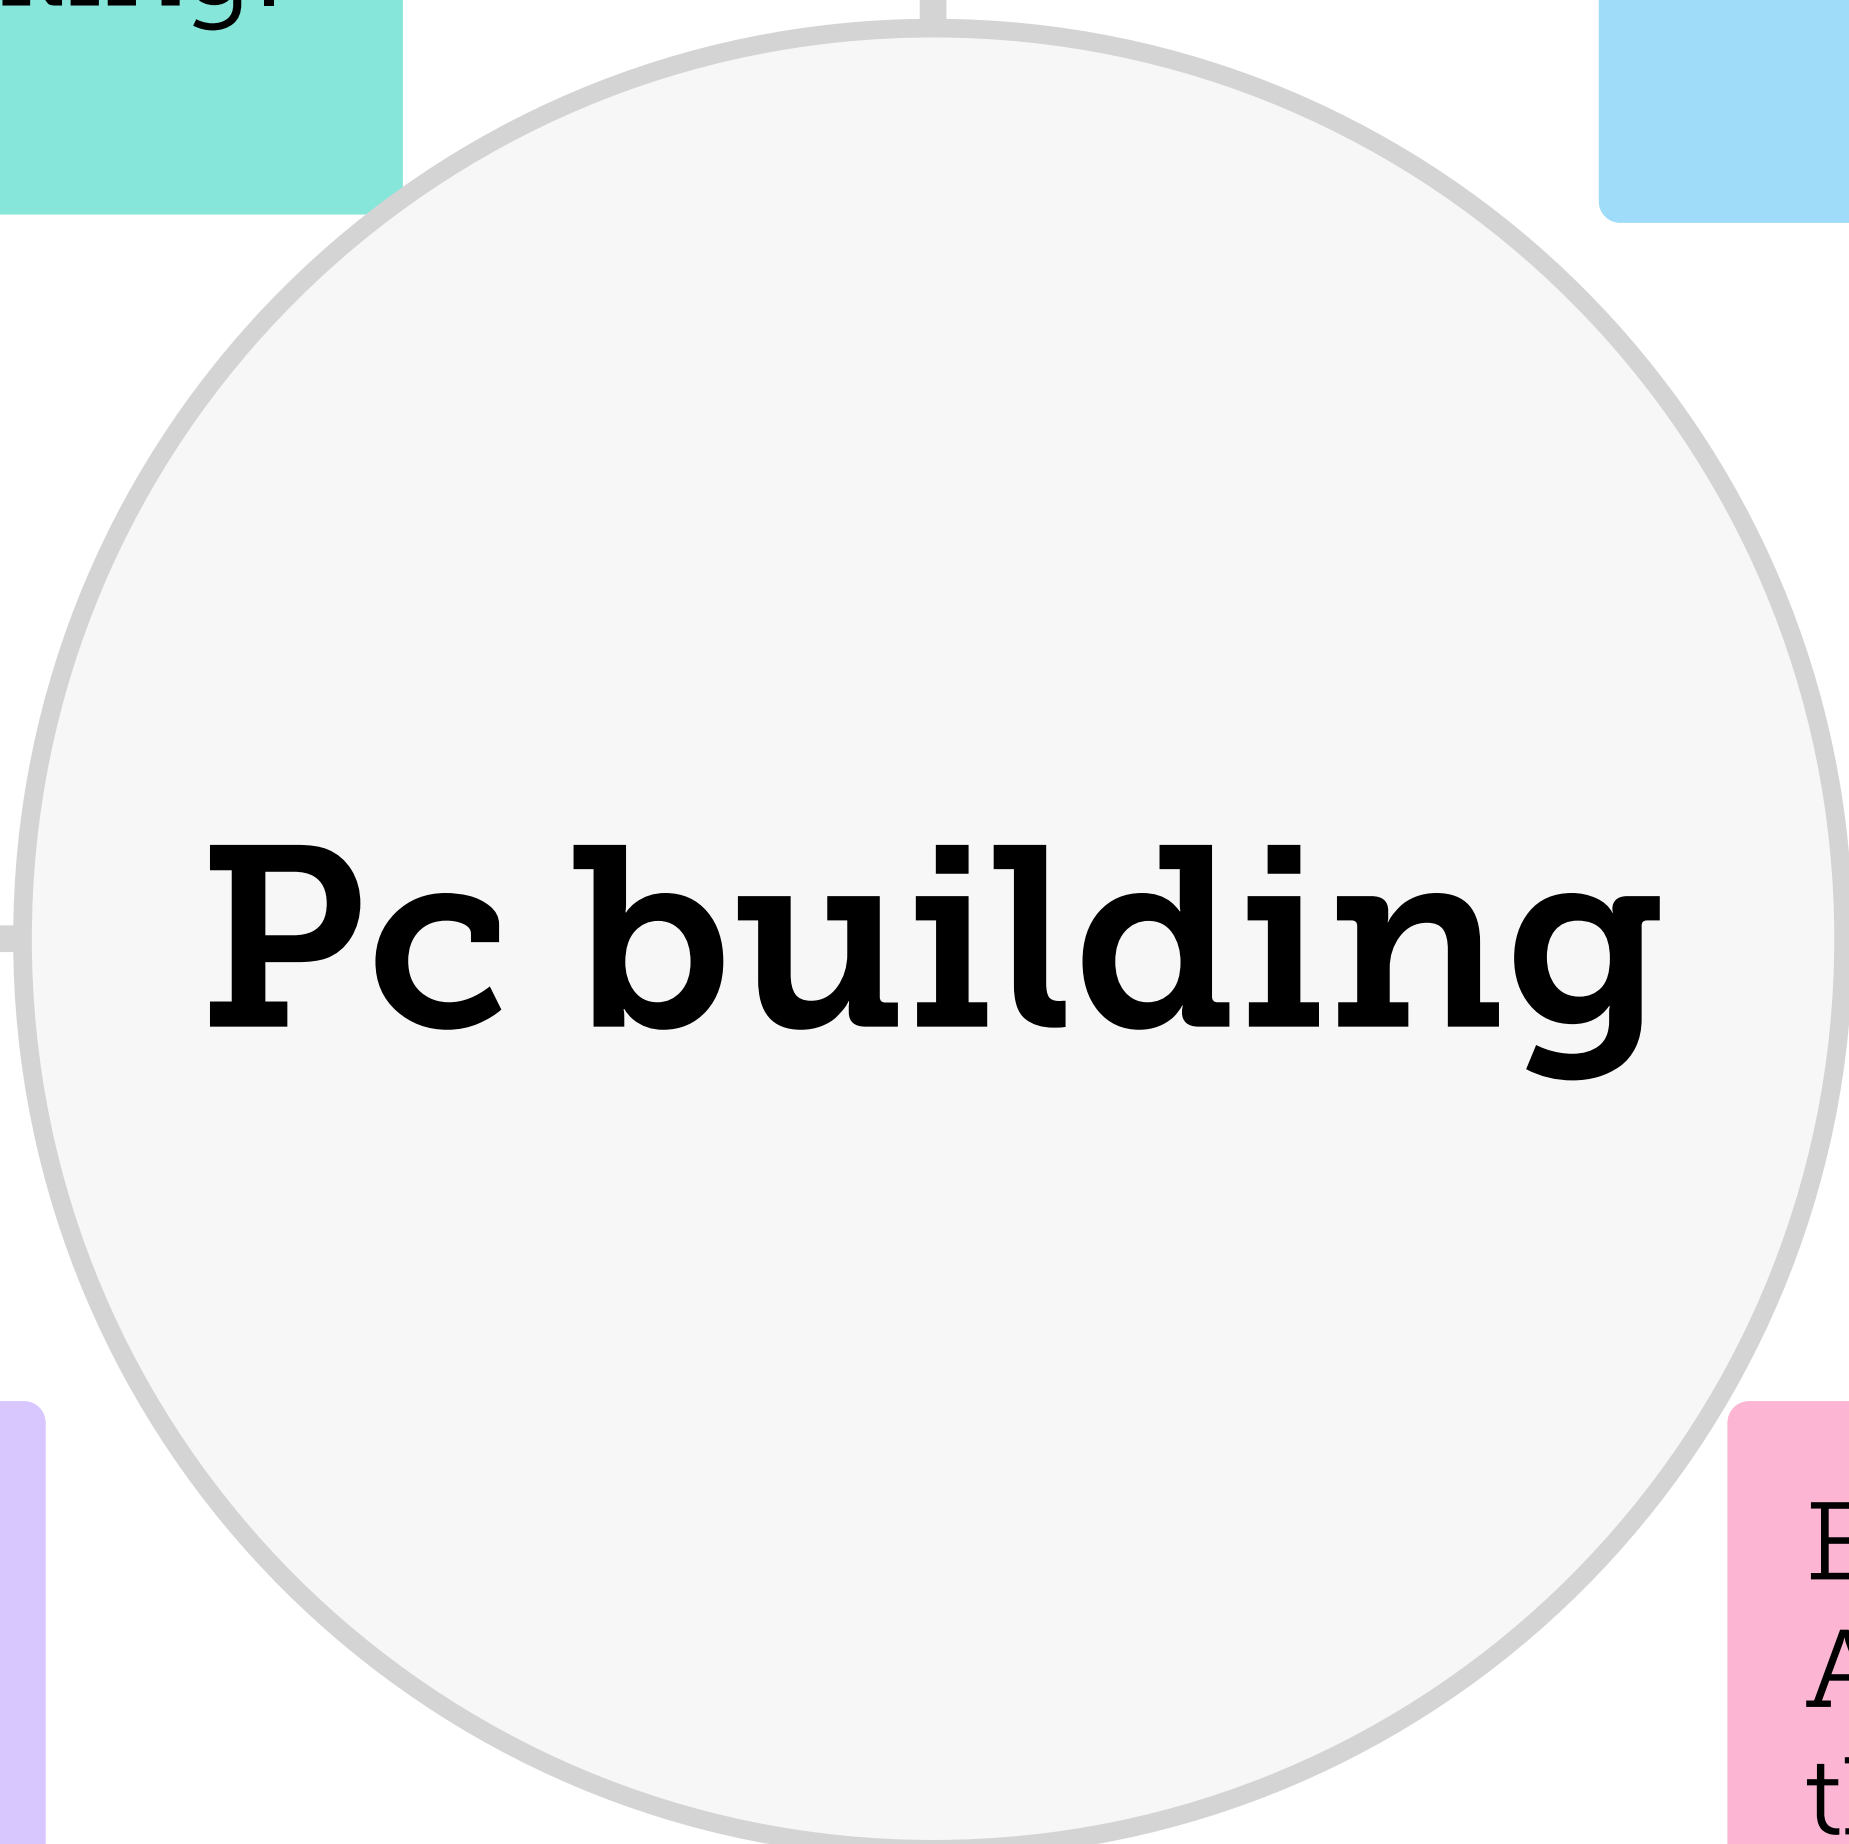

Thinks

I wish I had more information about compatible parts and assembly instructions.

Is it worth investing in high-end components for better performance

I hope I don't mess anything up while assembling the PC.

Pc building

Research: Spend time reading reviews, watching tutorials, and seeking advice online.

Budgeting: Calculate and compare costs to find the best components within their budget.

Shopping: Browse online and offline stores for PC parts and accessories.

Excitement: Anticipating the improved performance and features of their new PC.

Satisfaction: Proud of successfully building their own PC.

Anxiety: Nervous about making mistakes or damaging expensive components.
